

Memberships and cooperations

We are a member of various associations and working groups / professional and industry associations and active as a partner in strategic research and development platforms that support targeted and effective cooperation between many stakeholders from different areas. In addition to providing environmentally friendly mobility solutions of the future, issues such as safety, automation and decarbonization are also jointly championed. When we select our cooperations, we also focus on the promotion of education and training for skilled workers in technical professions.

Through these commitments, our goal is to address topics that are relevant to the company's success – including, in the area of education, to pool shared interests, and meet the social, ecological, and economic challenges of future mobility.

The following is an excerpt of our most important memberships and cooperations:
